Playful elegance

FOCUS-LIGHTING

Yoyo – playful elegance

Yoyo is a family of interior luminaires designed for Focus Lighting by C.F. Møller Architects. The elegant luminaires are ideal for almost any lighting purpose in public and private buildings – bridging the interior setting from halls and offices to stairs and corridors.

One design
– countless possibilities

Yoyo pendant

Yoyo on ceiling

Yoyo on wall

Ø225

Three sizes

Yoyo for wall and ceiling is available in three sizes; all with the same low depth of 51 mm. They look good in combination – also at stairs and corridors where flat, low-protruding fixtures are required. Yoyo pendant has the same diameter as the largest fixture, 535 mm.

Up-light/back-light

Yoyo's floating elegance is emphasised by up-light/back-light on ceiling or wall. Materials and structure will attract attention, and the fixture becomes an integral part of the room and the architecture.

Form by light and shadow

C.F. Møller Architects are the masters of Yoyo's elegant design with distinct curves and slim profiles. Concluded by sharp profiles at both ends, the characteristic parable results in a unique and sculptural look and the impression of a floating luminaire.

Design details

The slim profile

All Yoyo luminaires have the same low depth of 51 mm. The repeated design details invite to combine the sizes.

The curved profile

Yoyo's lightness is underlined by the curved profile, reflecting light and shadow on the matt surface colours in an elegant way.

The edged profiles

The slim edges contribute to the sculptural and elegant impression and make Yoyo seem floating.

The inner curve

Due to the recessed diffuser, light is grazing at the inner curve and is experienced comfortable and nonglaring.

Prismatic or opal shade

The opal shade offers a pleasant and diffuse light distribution. The prismatic shade results in a precisely defined light distribution with low UGR.

Play with Yoyo

Yoyo is available in seven matt standard colours plus raw aluminium. Play with the Yoyos and combine colours and sizes in your own unique project.

Raw sustainability

Yoyo in raw aluminium is elegant in its sheer simplicity, and every single luminaire is unique, carrying its own footprint from manufacture. These products have their own individual touch.

Impressions

With the Yoyo family you can create a link between rooms and applications across a building. Whether the light project being in education, culture, business, recreation, or anything else, you can shape an elegant and playful solution with the Yoyo luminaires.

Design and Lighting

Our design philosophy is inherited from Danish and Nordic design traditions characterized by "form follows function". We strive for a subtle and elegant design expression which looks attractive in many different settings and for many years to come. Our lighting philosophy aims at the right balance between efficient and comfortable lighting which is pleasing to the human eye.

Circularity, Modularity and Life

Our products are designed and engineered as modular constructions. This secures an easy service of single modules in a luminaire, and provides options for technology upgrades on existing products and installations. The modular construction makes it possible to reuse components in new luminaires. In the case of Yoyo the ring is cast in recycled aluminum in Denmark. In fact, 90 percent of the Yoyo components are manufactured in Denmark.

Focus Lighting

We are a team of dedicated people at Kokkedal, north of Copenhagen, and we service customers around the world through our network of qualified partners. We have a portfolio of high quality products for both in- and outdoor for the professional market.
